Assignment 4

Modify your website from assignment 3 to incorporate a 2 new pages

One of the pages is for the users to add a suggestion for a good or bad site.

Include the address of the web page, who is submitting the page, if they think it is a good page or a bad page, and a paragraph for why it is good or bad. Save the item in a database that you will create. Add a class that relates to the information saved. Pass the created object to a data access class and save it to the database.

The second page list the pages that are stored in the database. Let the user pick weather to see good sites or bad sites. You can display the listing in a gridview.
